Table of Contents

Overview

The upcoming Canada Rcopia4 release contains enhancements, backend changes and incident fixes.

Customer Impact

☐ Portal / SSO Partners	☑ Engine Partners	☐ Affiliates

It is recommended that you carefully review these release notes to gain a comprehensive understanding of the changes in this release and their potential impact on your specific workflows. While we conduct rigorous testing, we recommend that you test your specific integration and workflows prior to production deployment.

Enhancements

Enhancement	Functionality Impacted	Description
INTRX-2904	Concept Codes	A new concept set "x_TimeUnitsOfMeasure" is now available. These values are usable as duration units on prescriptions.
INTRX-2902	API validation	Prescribe_rxbundle, cancel_rxbundle, and reply_to_renewal_bundle APIs validation to allow both past and present concept codes to be used in the event a concept code is modified.
INTRX-2840	Allergies	Backend changes were made to the Allergies element formatting. No API changes were made.

Incident Fixes

Incident	Functionality Impacted	Description
INTRX-2832	Username creation	**Issue:** When creating a user that has a hyphen in their last name and no username is provided, the Admin Portal was generating a username that contained a special character. This special character is not permitted to be used in the username field on multiple API specifications. **Resolution:** Users who have last names that contain hyphens will now generate a username that contains no special characters.
INTRX-2785	Reactivate Organization	**Issue:** If an organization is inactivated and then reactivated, the organization will no longer receive prescription responses. **Resolution:** Reactivated organizations will continue to receive prescription responses.

Contact Information
